### **DETAILED ACTION**

1. This office action is in response to the amendment filed on July 21, 2010, in which claims 1-13, 15-16, 18-25, 27-33, 35-41 and 43-45 are presented for further examination.

#### ***Response to Arguments***

2. Applicant's arguments filed on July 21, 2010, with respect to claims 1-13, 15-16, 18-25, 27-33, 35-41 and 43-45 have been fully considered and are persuasive. The 102 rejection set forth in the last office action has been withdrawn.

#### ***Allowable Subject Matter***

3. The present application has been thoroughly reviewed. Upon searching a variety of databases, the examiner respectfully submits that claims 1-13, 15-16, 18-25, 27-33, 35-41 and 43-45 are allowable in light of the Applicants arguments and in light of the prior art made of record.

#### ***Reason For Allowance***

4. The following is an examiner's Statement of Reasons for Allowance: The present invention is directed to a method of analyzing intellectual property documents by assigning attributes to the documents and using of customized attribute types and attributes to filter information. The closest prior art, Matsuda T (US Patent no. 7,228,296) is directed to an arranging unit arranges the elements in extensible mark-up language (XML) document acquired in a row, according to tree structure of elements, wherein the character-string data comprising character string within start and end tags, is extracted from each arranged element and wherein

Art Unit: 2162

the link data that associates the extracted character-string data with node-type identified for each arranged element, is generated in order to enable interpreting XML documents in advance and store by dividing into documents-structure data and character-string data, and increasing frequency of referring to fixed length documents-structure data having a short bit-width.

Character-string of variable length is referred only when node-test mode is completed, hence frequency of referring to character-string data of variable length is reduced thereby increasing information retrieving speed.

Chronis et al., (US Patent no. 6,275,229), on the other hands, is directed to a several information items are grouped based on the date value, wherein a screen icon is assigned to each information item so that screen icon has a display color to represent a confidence factor and a graphical representation of the information is displayed on a window so that the information is displayed as a function of information groups and screen icons a process of eliminating duplicate in a file system.

Neither Matsuda nor Chronis singularly or in combination anticipate or render obvious the recited features “accepting, from an input device, a user's selection of a plurality of attributes to be associated with a single pre-determined attribute type for the at least one document, the attribute type having parent and child attribute types, the selected attributes being predetermined and having different parent attributes, attribute types being predetermined and ordered in a predetermined tree-structure hierarchy; and responsive to the selection of the attributes, automatically tagging, in the first data storage, the documents in the group including the at least one document, with the selected attributes, and with all attributes of all ancestors but not descendants or siblings according to the hierarchy of the selected attributes; and storing, in a

Art Unit: 2162

second data storage, respective references in association with the selected attributes and the ancestor attributes, for later retrieval of individual documents in the group by searching the ancestor attributes instead of the selected attributes, the respective references uniquely indicating respective individual documents in the first data storage”. These features, in conjunction with all other limitations of the dependents and independent claim renders claim 1-13, 15-16, 18-25, 27-33, 35-41 and 43-45 allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance”.
